

COMMONWEALTH BUREAU OF CENSUS AND STATISTICS,
MONTHLY BULLETIN OF EMPLOYMENT STATISTICS
OCTOBER, 1945.

Issued for General Information

MORNING PAPERS : MONDAY, 24TH DECEMBER, 1945.
EVENING PAPERS : MONDAY, 22ND DECEMBER, 1945.

Note: Wages Paid (Part IV) will not appear until later
Statistics become available.

PART I.

TOTAL PERSONS OCCUPIED, JULY 1939, JUNE 1943 AND MARCH 1944.

Issues of this Bulletin prior to February, 1945, contained comparisons of total number of civilian breadwinners distinguishing sexes and grades in July, 1939, June 1943, and March 1944. Corresponding figures relating approximately to the end of May 1945 will be available in a few months when the coding and tabulating of Occupation Survey Cards is completed.

PART II.

SECTION A. TOTAL WAGE AND SALARY EARNERS IN CIVIL EMPLOYMENT.

Total wage and salary earners working in all industries (including rural and private domestic employment) are shown at intervals in the table below:-

AUSTRALIA - WAGE AND SALARY EARNERS IN CIVIL EMPLOYMENT

(a) Excluding unpaid helpers. (b) Not available. (c) Partly estimated.

Note: Statistics of employment in rural industry are obtainable only annually at the collection made in March and of private domestic service only at a Census or quasi-Census, such as the Occupation Survey of 1st June, 1945, results of which will be available within a few months.

The balance of Part II of this monthly Bulletin deals with figures of wage and salary earners in employment, exclusive of rural and private domestic. The figures in all cases relate to wage and salary earners in civil employment only and exclude persons engaged as employers or on their own account or serving full-time in the Army, Navy and Air Force (including Permanent Forces).

SECTION B. AUSTRALIA - WAGE AND SALARY EARNERS IN EMPLOYMENT
(EXCLUDING RURAL INDUSTRY & PRIVATE DOMESTIC SERVICE).

Estimates of the number of wage and salary earners in civil employment (excluding rural workers and female domestics in private homes) are made monthly through the use of Pay-Roll Tax statistics and direct returns of Commonwealth Government employment.

The trend of employment after the outbreak of war in 1939 is shown in the table below:-

(a) Includes all direct Government employment, viz., civilian employees of Commonwealth Government factories, civil and war departments and construction authorities, and of State, Semi-Government, Local Government and Allied Government Authorities.

(b) See Note (d) on page 4.

Total wage and salary earners in civil employment, Government and private, (excluding rural and household domestic) reached a peak in November 1941 (1,952,300) following which there was a heavy decline in male employment as men were called up for the Armed Forces. Male non-rural employment reached its lowest level in the second half of 1943, and then remained fairly steady until the beginning of 1945, when a slow expansion began. The tapering off of war industries together with industrial disputes resulted in decreases during September and October, 1945. Female employment (other than rural and private domestic) expanded quickly until mid-1943 and thereafter at a slower rate until early 1945 since when there has been a decrease which accelerated with the end of the war.

Over the war period from July 1939 to its peak in August 1943, direct Government employment rose from 405,000 to 546,900, an increase of 141,900 persons. From its peak the number of persons in Government employment fell to 517,000 in August 1945 and to 500,100 in October 1945, or by 46,800. From August 1943 to August 1945, private employment (excluding rural and females in private domestic service) increased by 45,300 but during September and October 1945, decreased by 9,700 (see comment below)

Figures in the preceding table relate only to wage and salary earners (excluding rural industry and females in private domestic service) and do not reflect the full effects of either the policy of restoring Service personnel to industry which was applied as from about August 1943, or of demobilisation following the end of hostilities.

(See Part III for statistics of discharges.)

The slow rise during 1945 in the number of male wage and salary earners in employment was interrupted in September, the first month following the end of the war. However, the increase from January to August, 1945, was much less than the inflow of former servicemen. It is considered that the following factors are operating to offset the flow of discharged men into employment as wage and salary earners and the small normal increase in the male wage and salary earning population:-

- (a) Some men who remained at work beyond their normal retiring age are now retiring from work;
- (b) Considerable numbers of self-employers and small employers who were engaged as wage earners during the war are now returning to their former status.

Data relating to the change since 1943 in numbers of females in private domestic employment and in numbers of employers and persons working on their own account will be known in a few months time when the results of the Occupation Survey of June 1945 become available. This Survey may also reveal that total male wage and salary earners in private employment, and in total employment, shown above for 1944 and 1945, exclude some private employment on smaller buildings (houses, etc., including repairs).

From August, 1945 (end of the war) to October, 1945, the estimated number of wage and salary earners in civil employment (excluding rural industry and females in private domestic service) decreased by 26,600 (males 10,800 and females 15,800). Total employment was 1,893,300, the lowest figure recorded since this monthly series commenced in July, 1941.

During October, 1945, the number of persons in Government employment decreased by 8,000 and private employment (excluding rural industry and females in private domestic service) decreased by 1,600.

In addition to the recent slight downward trend in female employment, there were a number of special factors accounting for the sudden decreases during September and October, 1945, which affected both sexes, but more particularly females. The major movement was a decrease of 22,200 (males 14,000; females 8,200) in Government and quasi-Governmental munitions, aircraft and shipbuilding establishments as shown in the following table:-

A few thousand persons (mainly males) were idle during October, 1945, as a result of industrial disputes in New South Wales.

Details of the movement from September to October, 1945 of employment in the main industrial groups follow immediately below:-

REHABILITATION STATISTICS (DISCHARGES FROM THE FORCES)

The following statistics have been derived from tabulations of Demobilisation Form 1(a) made at the request of the Director-General of Manpower. The forms show personal particulars of men and women discharged from the Forces into civil life. The month of discharge, for the purpose of these tabulations, is the month during which the discharged person was able to resume civil life, irrespective of the fact that he or she may still be on service pay for a period of accrued leave.

The first table shows that in August, 1945, there was a sharp rise in the number of men discharged due to the operation of the long service and other special discharges programme. Nearly twice as many as in August were discharged in September. General demobilisation commenced on 1st October and 42,667 men and 2,787 women were discharged during that month. The numbers increased to 66,779 men and 4,016 women for the month of November, 1945.

PAY-ROLL TAX RETURNS

A summary statement of employment recorded on Pay-Roll Tax returns for Australia is given without any adjustment in the next table.

The returns do not cover employees of the Commonwealth Government; employers who pay not more than £20 per week in wages do not make returns and religious and public benevolent institutions and hospitals are also exempt. The proportion of all employees who are included varies from State to State, but for Australia as a whole, the proportion of employees (other than those of the Commonwealth, those engaged in rural industries and female domestics in private households) in the Pay-Roll Tax returns is 90 per cent. of the estimated total of males in employment and about 75 per cent. of the females.

Employers' Pay Roll Tax returns were classified for "industry" according to the industries in which the firms were predominantly engaged.

The table may be taken as indicating trends from month to month, but not as a guide to the absolute numbers employed in the respective industries.
